TICINO DATA CONFERENCE

Agenda

01 Where we started

02 What is „Performance“

03 DirectQuery & Direct Lake

04 Demo-Time

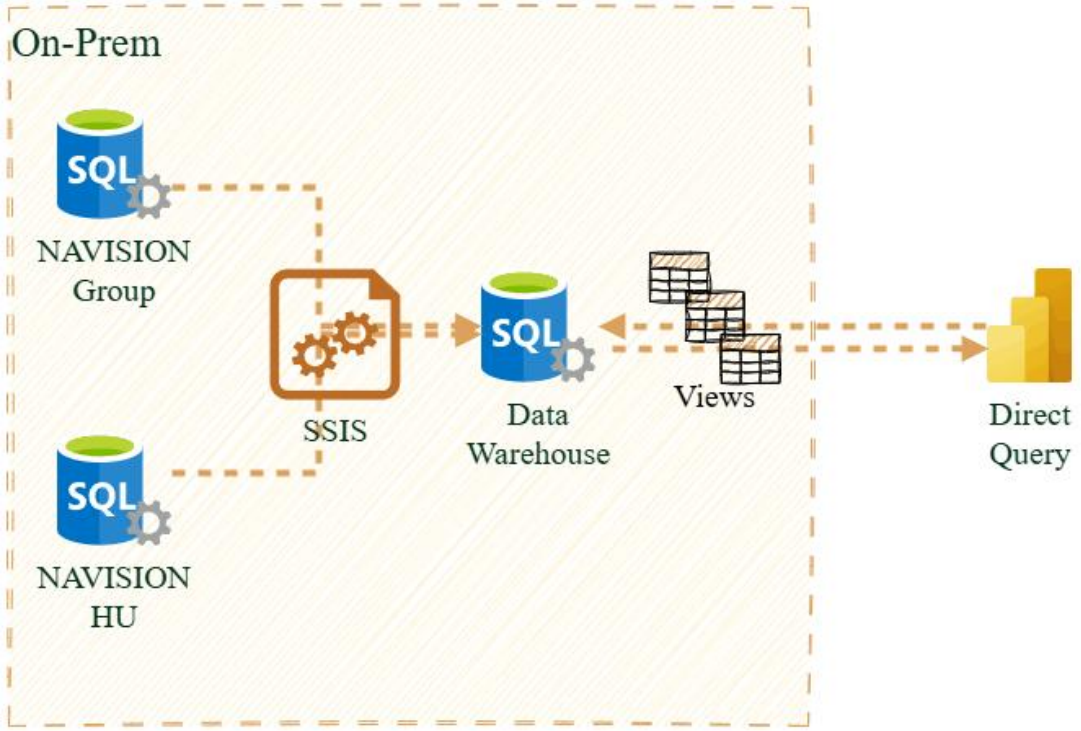

06 Where we landed

07 What we learned

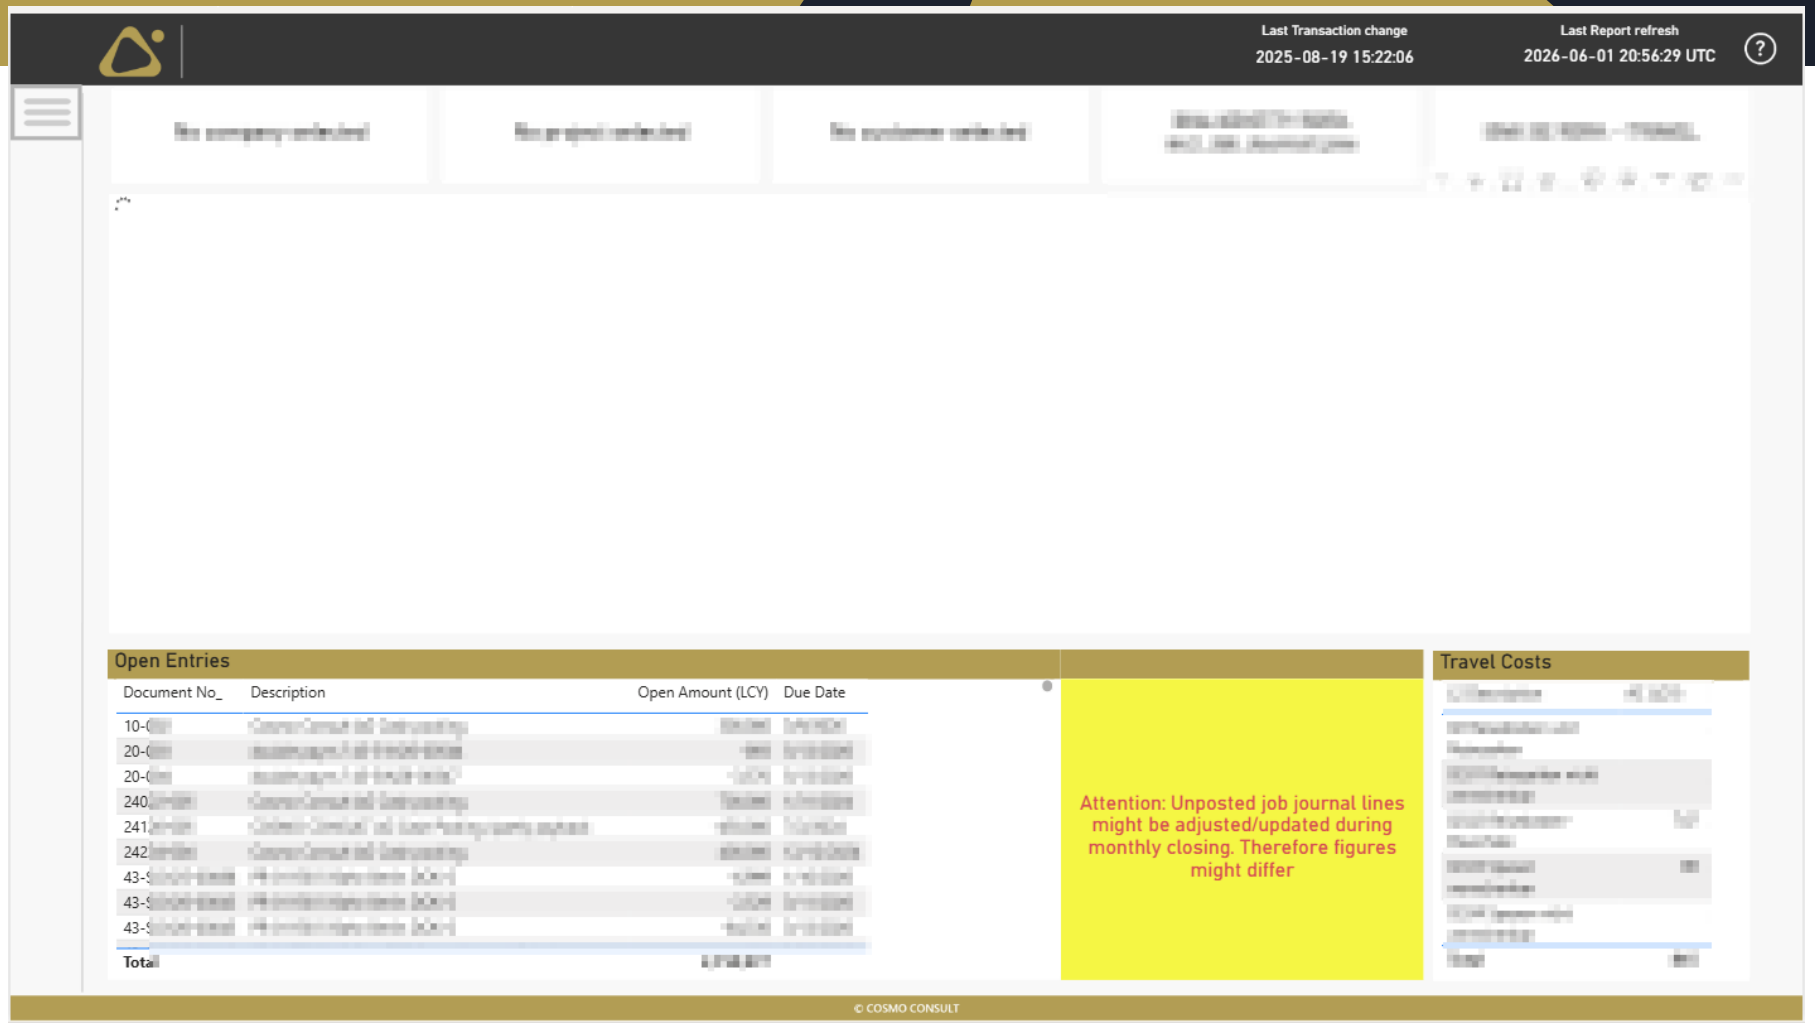

Where we started

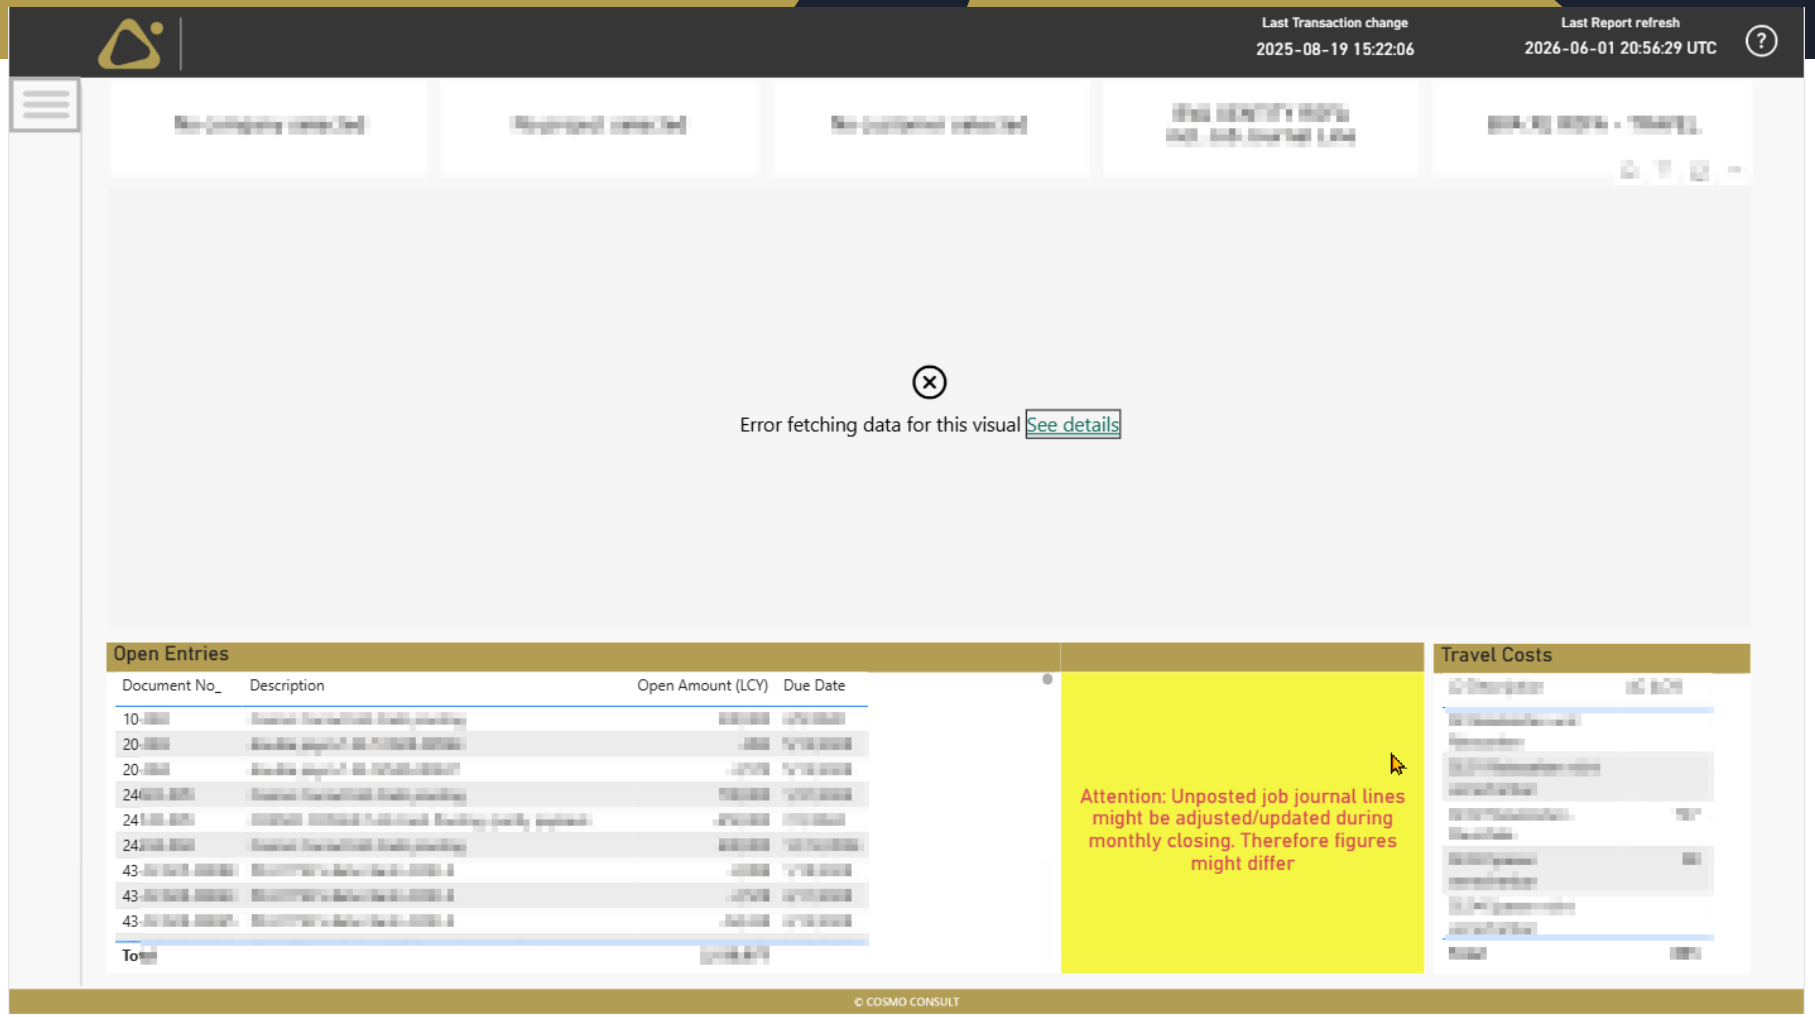

- 2 Source DB & 55 Companies
- 480 Source- → 11 Target tables
- 7 Views for data transformation
- Data latency ~5 Minutes

Why?

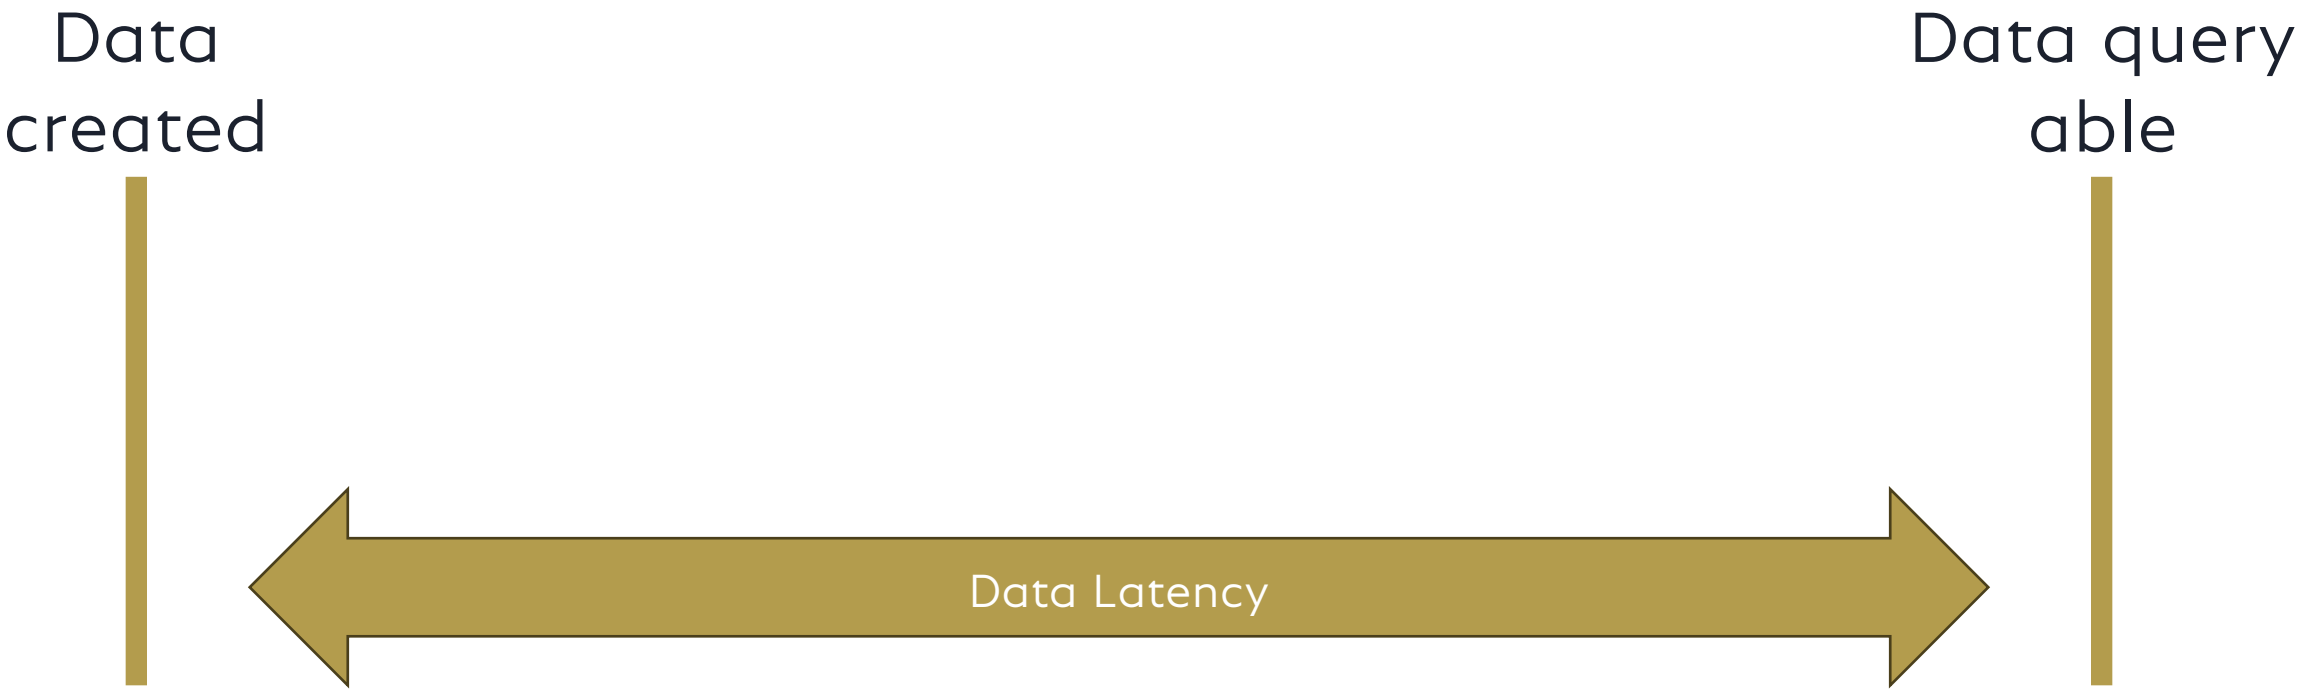

Last Transaction change
2025-08-19 15:22:06
Last Report refresh
2026-06-01 20:56:29 UTC
Open Entries

Why?

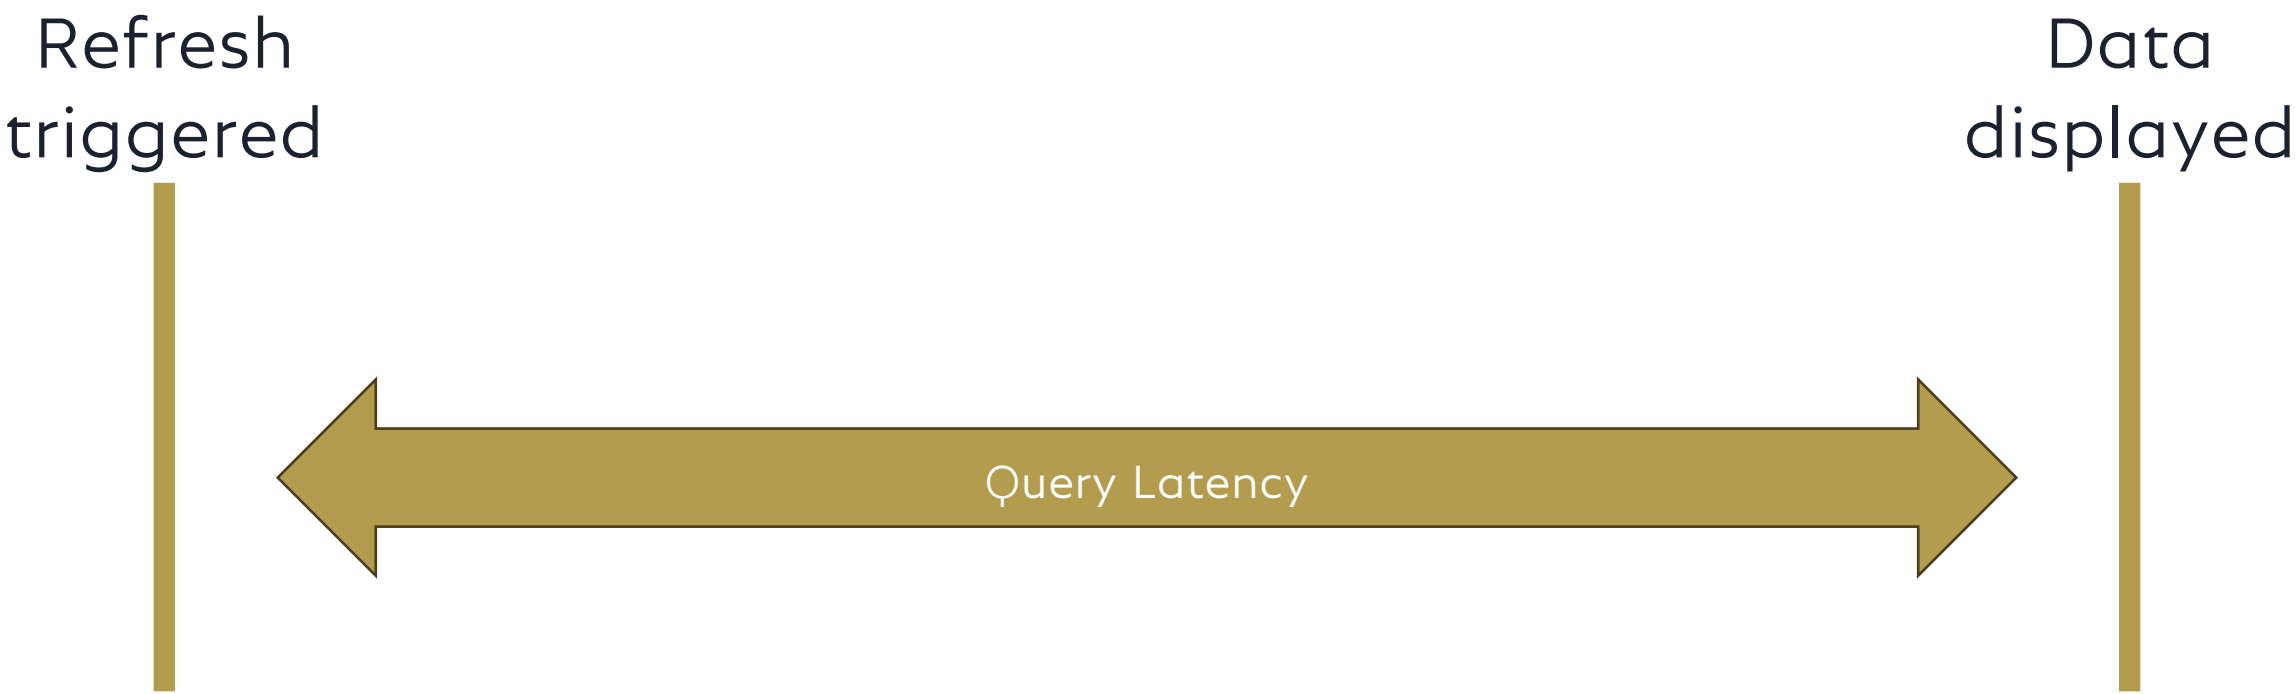

TICINO DATA CONFERENCE

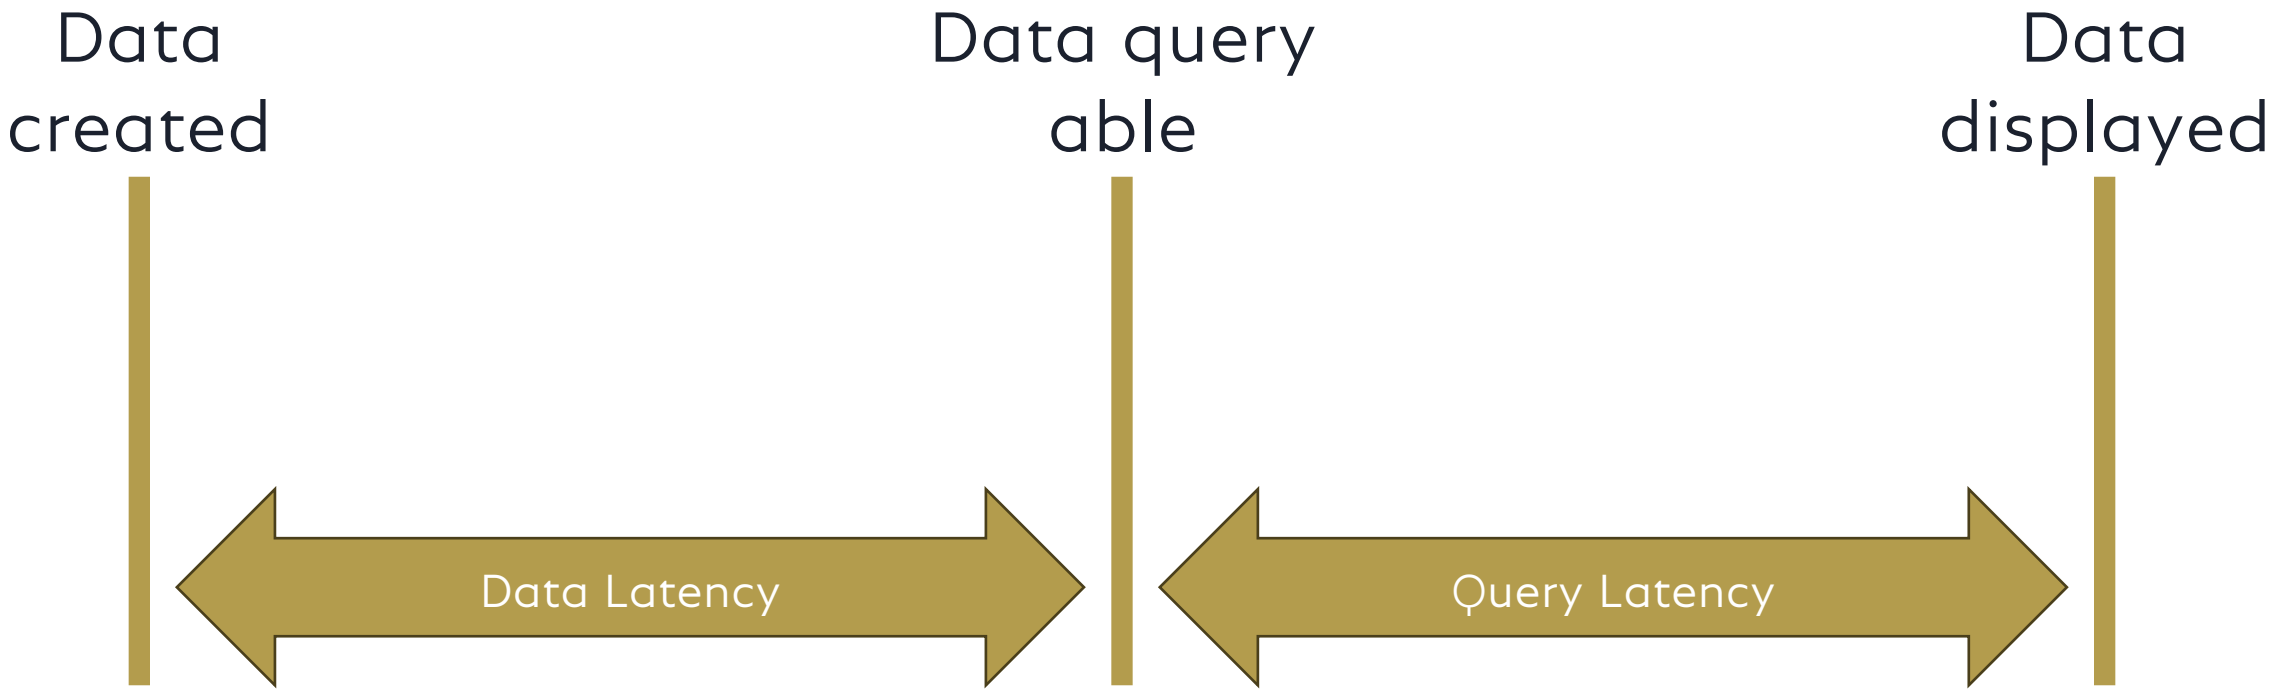

Performance

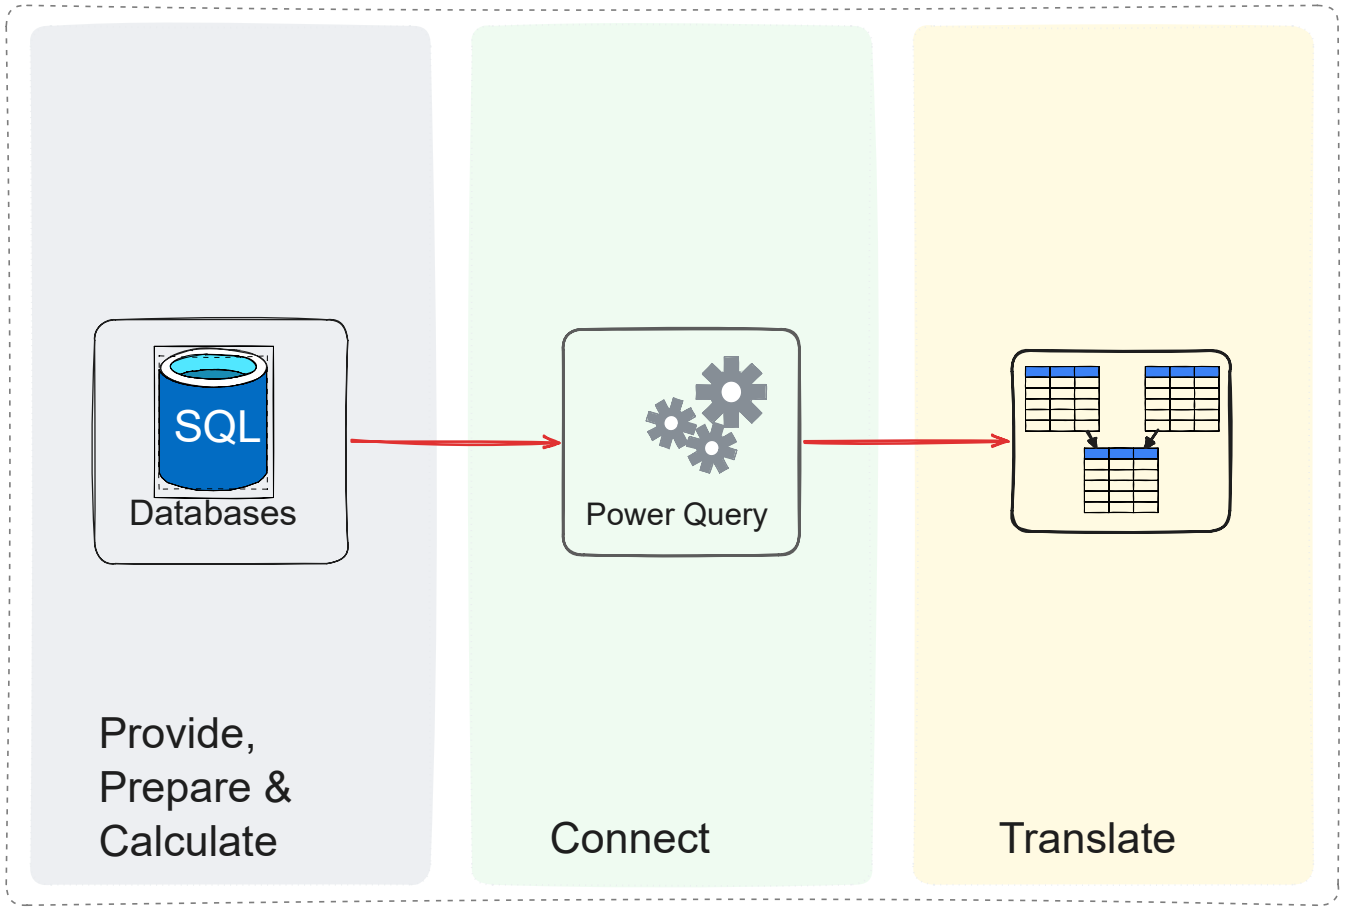

Performance

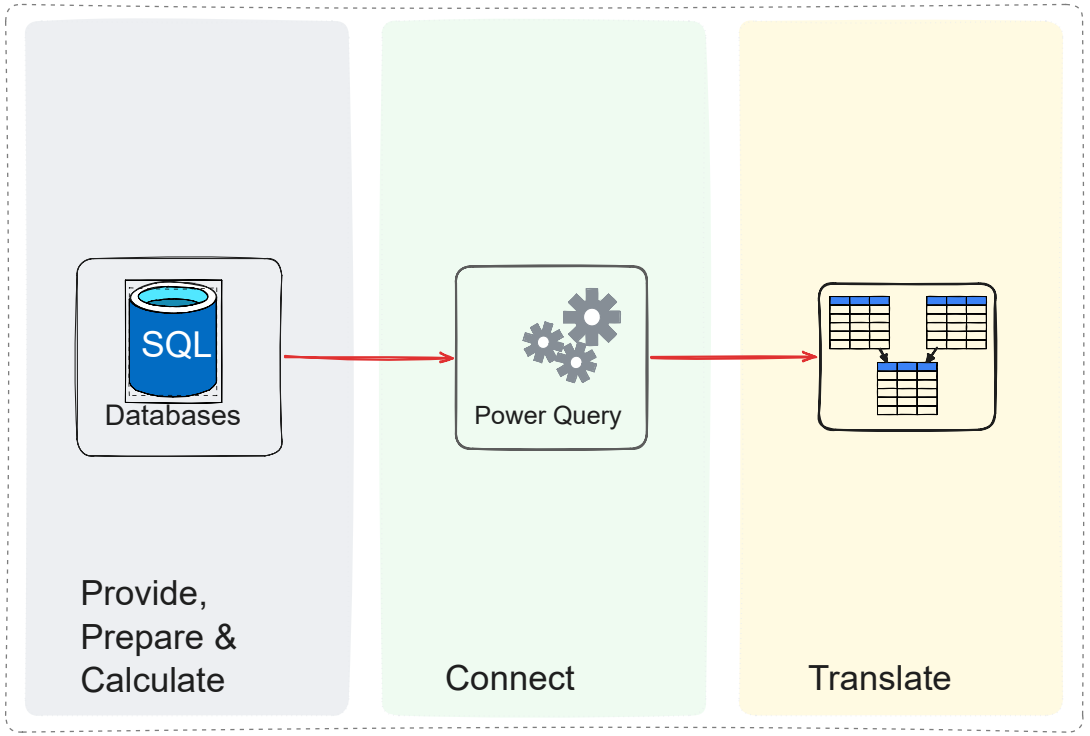

Performance

DirectQuery

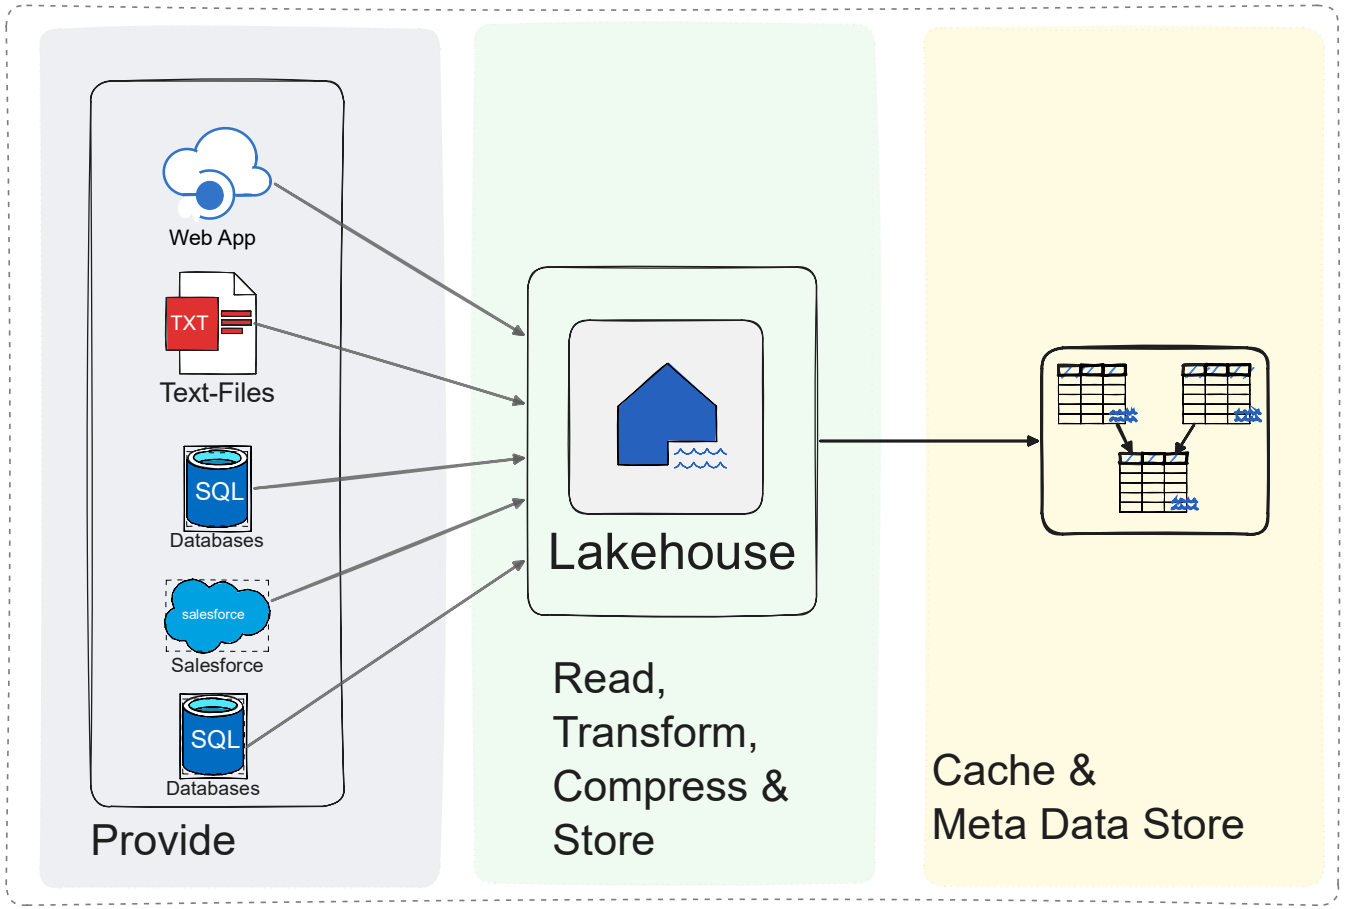

DirectQuery

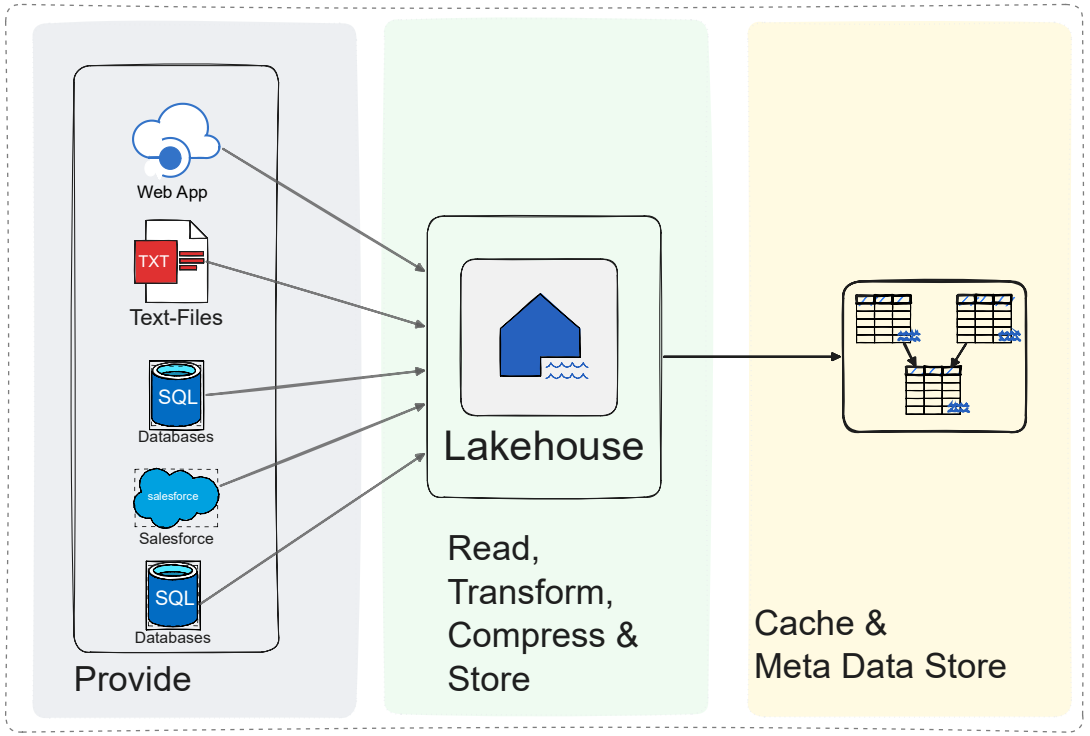

- Data stays at source & always up-to-date
- „no" model size limits
- Data source security can be leveraged
- Limited DAX & data source support
- Calculated tables not supported

Direct Lake

Web App
TXT
Text-Files
SQL
Databases
salesforce
Salesforce
SQL
Databases
Provide
Lakehouse
Read,
Transform,
Compress &
Store
Cache &
Meta Data Store

Direct Lake

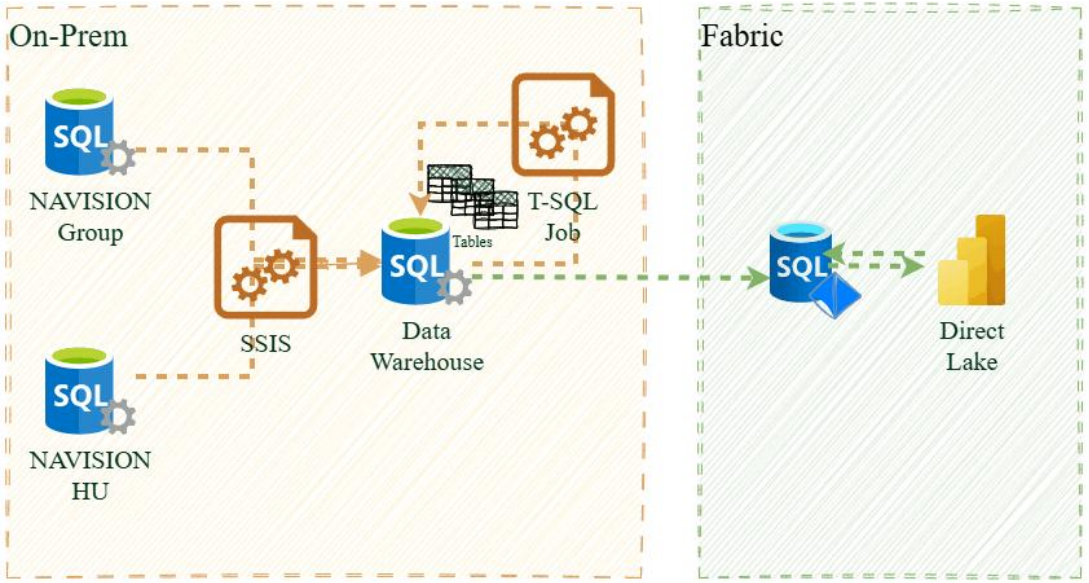

- Vertipaq engine
- Decouples import and query workload
- Model size limited by fabric capacity
- One-lake security can be leveraged
- Limited support on calculated table

DEMO-TIME

Where we landed

- Transformation with T-SQL Jobs (Stored Procedures)
- CDC-based mirroring (10 Tables)
- Data latency ~12 Minutes
- Query latency <10 sec

What we learned

- Review your transformations & DAX Code
  - Are all transformations still necessary
  - Can you move logic to DAX
- Keep an eye on new features
  - Materialized Lake Views
  - Optimized mirroring for SQL Server 2025
- Be aware of Fabric Guardrails
  - How much storage is included
  - When will your Direct Lake report brake
- Increased polling interval on stale data
  - Documented only for google

Thank you,

stay curious &
please give feedback

From DirectQuery to Direct Lake - Supercharge your live-data reporting for on-premise data
